How does Cyklop operate during the Corona Epidemic?

The most important thing is to provide security for our / your employees and still operate in a sustainable way.

To promote the health and safety of our and your employees, we work according to the following guidelines:

Cyklop constantly monitors the situation and follows instructions from the authorities.

Everyone who has the opportunity works from home.

All business trips and all activities requiring participation of third-party individuals are cancelled.

Our sales staff is ready to help by phone or by mail.

We always follow instructions from the government regarding hygiene and social manners. Do not shake hands, keep at least 2 meters distance, wash hands regularly, etc.

Our technicians will only contact the specified contact person by telephone if possible.

When our technicians work on the machine, no other people should be present or work closer than 2 meters from the machine / technician.

Disposable gloves are used as far as possible.

Secure delivery is maintained through increased inventory - goods are stored for a longer period of time in our warehouse.

Alternative suppliers are used parallel as an extra security.

Thanks for your cooperation.

Cyklop-Emballering A/S
